

```

1  #include <iostream>
2  using namespace std;
3
4  int tripleByValue(int); //這個裡面的type是必要的嗎
5  void tripleByReference(int &);
6
7  int main() {
8      int count;
9      cout << " please enter a value : ";
10     cin >> count;
11     cout << " triple by value : ";
12     cout << tripleByValue(count) << endl;
13     cout << " origin value : ";
14     cout << count << endl;
15     tripleByReference(count); //這一行只有呼叫出來東西
16     cout << " triple by reference : " << count << endl;
17     return 0;
18 }
19
20 int tripleByValue(int number) {
21     return number*number*number;
22 }
23 void tripleByReference(int &Refnumber) {
24     Refnumber*=Refnumber*Refnumber; //pass by reference
25 }
26

```

C:\devcpp\hw10\10-1\10-1.exe

```

please enter a value : 6
triple by value : 216
origin value : 6
triple by reference : 216

```

```
